

SFUMATO-Edition

Dear friends of special edition Christmas ornaments.

We are honored to introduce our first SFUMATO-Edition for this year's show. You ask what is Sfumato?

SFUMATO is a special technique invented by Leonardo da Vinci. He 'wrapped' his landscapes in fog to create an illusion of depth and volume, by applying several layers of glaze, thus achieving the gradual look from light to dark.

We have studied and adopted this special technique and applied it to our new collection.

To produce the fine layers of the background hues, we repeatedly submerge these special ornaments in colored washes until the desired effect was achieved, thus creating a perfect background that enhances the look of the winter scene. When illuminated by light, or a candle, this method creates an atmospheric depth, which is heightened by the translucent glass to present the viewer with a magical and romantic feeling.

The SFUMATO-Edition is available as follows:

Glass ornament	100 mm
Glass ornament	80 mm
Tea light	120 mm
Wind bowl	
Wind light	
Wind bell	
Small lantern	

Our products are completely hand made. Each item is mouth blown and carefully hand painted using this special **SFUMATO** technique by our artisans. The SFUMATO-Edition is available in blue, terra cotta and white.

We hope we have peaked your interest in our SFUMATO-Edition and we look forward to your response.

Sincerely,

Emil Hoessler, ✉ Marktplatz 6, D-55566 Bad Sobernheim ☎ 004967518533907 🌐 www.rugla.de
